

PROJECT:

Our customer needed a traveling tradeshow booth and shipping case in one. They needed an attractive inside with slatwall and drawers, and an indestructible outside surface

---

*Step 1:*

We worked closely with the customer on several potential designs

*Step 2:*

After the final design and functionality were hammered out, we created final design drawings to present for approval. The cases were approved for production.

*Step 3:*

A Prototype case was build and delivered to the customer for approval.

*Step 4:*

A few size and shelf positioning changes were made, and the project was approved for production. The cases were produced and delivered to the customer on schedule.

*Step 5:*

We performed a full project documentation, quality control reports and a permanent project file. A certificate of compliance and quality record was sent to the customer.
